

On the whereabouts of Elvis Presley and

Satoshi

Nakamoto

Conspiracy theories

A few facts about Satoshi Nakamoto just don't add up:

1. His power to resist temptation - money, fame and attractive partners of the opposite sex - is off the charts:
 - a) Satoshi Nakamoto is resistant to money – lot's and lot's of money. He isn't spending his initial stash of bitcoins, currently worth billions.
 - b) Satoshi Nakamoto is resistant to fame – lot's and lot's of fame. Nobel prizes, etc. – you name it.
 - c) With 1) and 2) above, Satoshi Nakamoto would have, most likely, gotten the best looking romantic partner. So Satoshi Nakamoto is resistant to the charms of the opposite sex, too.

The only person that I know of who could resist such temptations was nailed to the cross two thousand years ago. Therefore,

It is safe to assume Satoshi Nakamoto is not a “guy”.

(Somewhat similar arguments can be made that Satoshi Nakamoto is not a “gal” either.)

2. Satoshi Nakamoto has a well-rounded, deep, formally structured knowledge in too many disciplines to be a single person. Therefore,

It is safe to assume Satoshi Nakamoto is a group of professionals, at least some of them with academic backgrounds.

3. From (1) and (2) follows

That group of professionals is not from academia (would have fallen to the “fame” temptation), and is not from the private sector (would have fallen to the “money” temptation).

4. The way his invention was presented to the world is unnatural – you don't just show up from nowhere with a breakthrough like that. The creative process is usually long and winding – you end up in a lot of dead ends, you go back to square one, try out different routes; all along you talk to your friends/colleagues/girlfriend(s), your ideas get rejected, ridiculed, you are advised to “get a real job”, journals won't publish you, established names in the field don't want to talk to you, etc. etc. Therefore,

Secrecy was built into the development of the distributed ledger technology project from Day One.

5. Not only secrecy was built into the project from Day One, but it was rigorously followed with discipline and persistence. Therefore,

The group of professionals had a structured secrecy protecting *process*.

6. To maintain a group of highly competent professionals, at least some of which had academic backgrounds, a group which is not from academia and is not from the private sector, and a group which has a structured secrecy protecting process – costs a lot of money. Therefore,

The group was well funded.

7. The group of professionals developed a digital replica of gold.

Now – why would a group of highly competent professionals, well-funded but not from academia and not from the private sectors, with a structured secrecy protecting process in place, want to develop a digital replica of gold – in secret?

LANGLEY.

The US government, seeing the vulnerabilities of the financial system after 2007-2008, and having leased out (sold really) significant portion of its gold reserves (technically it's the Fed's gold reserves, but according to the Fed's own admissions all they have are gold receipts from the Treasury, not physical gold) – decided to develop a digital alternative. Couldn't do it in public though, as it would cast doubts on the official figures for the US gold reserves, and hence tank the dollar. They had to work in secret.

It may be relevant here, that the 1996 NSA paper "How to make a mint: the cryptography of anonymous cash" indicates there was thinking within these lines among the NSA cryptographers; moreover, the name of the one of the experts cited in the bibliography - Tatsuaki Okamoto – may have been the example used to come up with the pseudonym Satoshi Nakamoto – when we come up with pseudonyms, we sometimes start off with familiar names.

Conspiracy corollary one:

The gold reserves with the Treasury are diminishing.

Which brings us to the other, vastly more important for humanity, and probably equally electricity-intensive technology developed at Langley: the cryogenic chamber - the one whose technicalities were communicated in secret via the production of the "Austin Powers" movie, and where Elvis lives, in a cryogenic state, deep in the gallows of Langley.

Conspiracy corollary two:

Elvis is alive

And will be forever.

GO LANGLEY!
